

## Come, See for Yourselves.

SOMETHING FOR YOUR ADVANTAGE.

Having been engaged in FRUIT TREE business for several years, I think I can show it to be for the interest of all in York County to deal with me. I have traveled extensively in the business, in Maine, New Hampshire, and Massachusetts, and know what our best men are planting. I am handling

### 5000 TREES THIS SPRING!

many of them raised in N. H., and budded in the natural stock. It has been my business to sell Trees for other parties for several years. Sometimes I have had my orders filled with dead or worthless trees. I now manage my own business, and buy *Extra Stock*, or *Honest Men*. Every tree I sell is marked true to name. If I have not the exact variety ordered, I take the next variety ripening about that time. Intending to continue in this business, and deal in my own County, I shall spare no pains to do the honest thing with all. I want to see every tree succeed.

#### PRICES:

APPLE TREES, 5 to 7 ft., \$30 to \$35 per 100, Extra size, 7 to 8 feet, heavy, 50 cts. each.

PEAR TREES, 5 to 7 ft., 3 yrs. old, extra, \$1. 4 to 5 feet, 75 cts. each. Reduction where one person takes 100 trees.

Also, Cherry, Plum, Peach and Quince Trees, leading varieties Grape Vines, Currant, and Gooseberry Bushes and Strawberry Plants, all at reasonable rates.

Also, ORNAMENTAL TREES, of all kinds, Shrubs and Bulbs, it ordered in season.

Roses of all kinds, 75 cents to \$1 each. Standard Roses, Imported from France, \$2 each.

These sell in New York, by travelling men, for \$5 each. One has been seen for several years in the front yard of Mr. F. Meeds, on South Street, Biddeford. They only need to be seen to be admired. I furnish them in pots the present season, growing beautifully.

Orders sent by Mail will be promptly attended to.

Grounds, 243 Elm St., or KENNEBUNK ROAD, BIDDEFORD, ME.

**N. D. WITHAM.**

#### Directions for Transplanting, &c.

Be very careful in transplanting your Trees, and also in their after care. If you see a *success* in Fruit or Ornamental Tree planting and culture, ascertain the conditions, and then endeavor to do as well or better yourself. Plant your trees in deep, mellow, well drained soil. Thin out and head in the tops and cut smooth all bruised roots before planting. Dig large holes, 3 or 4 feet across and two feet deep, or better still, plow the whole ground, deep, and where the rows are to come plow a strip several feet wide two or three furrows deep. Work some fine, rich soil, in the bottom of the hole where the tree is to be placed. Use your hands to straighten out roots and fill in earth about them. Plant only as deep as they grow in the Nursery; tread down thoroughly. Be liberal. Scatter a bushel of manure on the surface, as far back as the roots extend; then mulch 6 inches deep with old litter or leaves, 3 or 4 feet back from the tree. Do something to make a growth of a foot or more each year. Cultivate some hoed crop among the trees—never grass or grain among young trees. Trees in grassy yards should be frequently dug about and manured, or they will become stunted. Wash apple trees several times in May and June with strong soap suds. Kill the caterpillars and hunt the borers with knife and wire. Low headed Fruit trees are the healthiest. Evergreen Trees should branch out to near the ground. Trim them by shortening in the top and side branches, to make the tree compact. Don't plow near enough to your trees to mangle the roots and branches, but level and dig mellow with spade and fork.
