WINSLOW'S IMPROVED GREEN CORN.

Our preserved Green Corn has been in the market many years, and its marked superiority over all similar preparations has been steadily maintained. In all our markets, both Atlantic and Pacific, it is a universal favorite; ever commanding the highest prices, and ready sales, where it has been introduced and tested.

We have spared no pains in procuring the best variety of seed—and are confident we have succeeded. Our works are located in the country—in the very midst of our corn-fields—so that there is the least possible interval between the gathering and sealing up of the corn, and it will be easily understood that it must be far preferable to that which has been carted a long distance before it has been put up. In the latter case, it is usually gathered the day previous, and when it arrives at the Factory, it is necessarily in a heated and sweating condition.

DIRECTIONS.

The Canister can be easily opened by cutting round the bottom with a stiff pointed knife or chisel, or what is better, a knife made for the purpose—The contents being previously heated, by placing the canister in boiling water, fifteen minutes. Or the canister may be first opened, and the corn heated in a frying pan—without scorching.

The corn is preserved in a perfectly natural state, consequently the consumer will season it to suit his taste, by adding salt, cream or butter.

Those who are fond of corn puddings, will find this an excellent article for making them.
